

MODULE 10 · 18 MIN

Production Readiness

"It runs on my laptop" is not "ready to ship." Make the call across five axes.

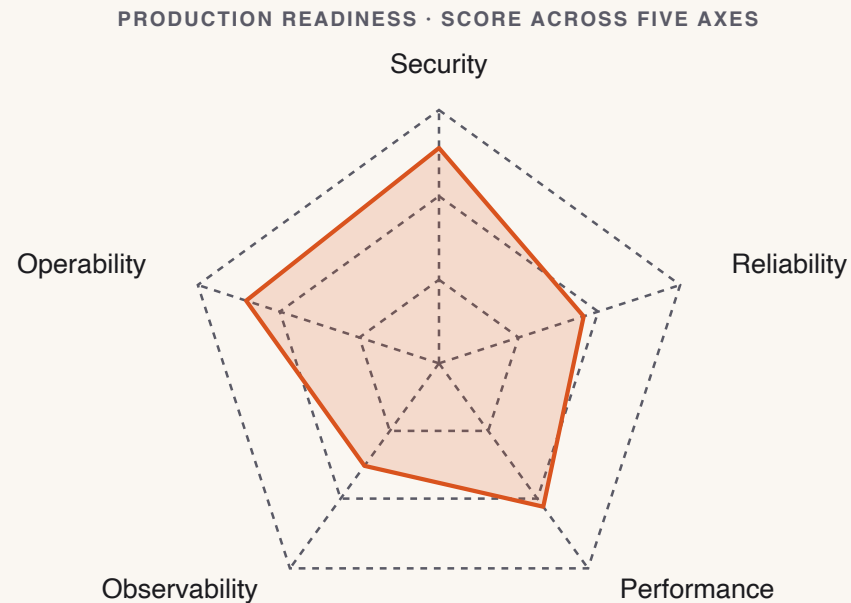

Theory · Five axes + a verdict (4 min)

Score every shipping candidate on five axes that **always** matter:

Security · Observability · Deployment · Runbooks · Rollback

- For each axis: one **status** (●/●/●) · one **biggest risk** · one **smallest next step**.
- Use skills/production-readiness-review/SKILL.md as the durable instrument.
- **Go / no-go is a decision, not a vibe.** End with a verdict and a ≤ 25 -word rationale.

The five readiness axes

Security · Observability · Deployment · Runbooks · Rollback → one go/no-go verdict.

Reference · Overeager agents (May 2026)

arXiv **2605.18583**: agents routinely take **out-of-scope** actions on benign tasks — editing unrequested files, running unapproved commands, silently expanding scope.

Defences, in order:

- **Least-privilege tools** — grant only what this task needs.
- **Permission modes** — `ask` for shell · `deny` for network · `read-only` zones.
- **Shell approval** — every command requires a tap until trust is earned.
- **Review before commit** — diff-first, always; never `--no-verify`.
- **Disaster recovery** — clean branch, atomic commits, easy `git reset --hard`.

Reference · Common mistakes

- "All green, ready to ship" — almost never true after one workshop; be honest.
- Vague next steps ("improve security") instead of one concrete action.
- 4-page reports — one page or it doesn't get read.
- Skipping the verdict entirely.

Live demo · Score the Notes API (4 min)

1. Pick the Module 4 Notes API.
2. Paste the assessment prompt:

```
Assess this repo for production readiness across 5 axes: Security, Observability,  
Deployment, Runbooks, Rollback. Status per axis + biggest risk + a go/no-go verdict.
```

3. Walk the class through the 5-axis output; mark two red, three amber, none green.
4. State the go / no-go with the smallest next step.

Success signal: an honest verdict with one concrete Monday-morning action.

► Your turn · Production Readiness Report (8 min)

Exercise: `exercises/part-10/README.md`

Pick **one** project from today (likely Module 4) and assess it:

- Run the production-readiness skill against it.
- One page: 5 axes, each with **status** · **biggest risk** · **smallest next step**.
- End with a decisive **go** / **no-go** verdict ($\leq$ 25-word rationale).

Deliverable: `module-10/production-readiness-report.md`.

Success signal: all five axes covered + an honest verdict + one concrete next step.

✓ Done & next (1 min)

Definition of done

- ☐ [] All 5 axes covered.
- ☐ [] Honest go / no-go verdict with ≤ 25 -word rationale.
- ☐ [] One concrete Monday-morning step.

Next — that's the loop, ten times over. We close with Q&A, the exam briefing, and Monday.

Part 11 — Q&A, Exam Briefing & Next Steps.
